

AGRICULTURAL APPLICATIONS

The more control growers have over their inputs, the more control they have over the crops they produce. Water filtration gives farmers one more level of control that can help them improve growing conditions, prevent disease, and increase crop yield.

The K-Factor Filter can be successfully applied to enhance irrigation systems used in agricultural and greenhouse systems. Water can be reclaimed and re-circulated reducing the costs and environmental impact of overusing precious water resources.

The K-Factor Filter can remove:

- Dirt particulate
- Pest larvae
- Unwanted and harmful plant debris

For more information on K-Factor filtration systems in agriculture and cultivation, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
