

CHEMICAL FILTRATION

From consumable chemicals to industrial chemicals, clarity and purity are essential. K-Factor's filtration and separation systems can make your process more efficient and improve finished product quality.

Our K-Factor Filters can be designed, manufactured, and supplied with plastic components for applications in chemical industries where metal filters are not useable.

This plastic K-Factor Filter was developed for a process requiring the filtration of hydrofluoric acid. It filters at 50 gpm and removes solids from a "special parts" dipping process.

For more information on K-Factor filtration systems in the highly specialized Chemical Filtration market, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
