

CHEMICAL SAVINGS

The combination of water, fuel, and chemical savings using a K-Factor filter will translate into significant savings over time. In wash and pre-treatment processes, the ability to reuse and recycle liquids drastically reduces the volume and cost of wash liquids, chemicals, and discharge fees.

This K-Factor Filter is used to filter the recirculated water for a waste stream of a high-pressure cleaning operation. Savings of chemicals and water were the motivators for this project. Filtering at 15 gpm and 5 to 7 microns produced an ROI in a matter of months.

For more information how K-Factor filtration systems can save money and reduce chemical consumption, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
