

Cyclone Purging

Cyclone separators are designed to remove suspended solids from liquids. The separating efficiency depends on the flow velocity and the density of the particles. The performance of hydro cyclones can be significantly improved using the K-Factor Filter as in this application at an OEM automotive manufacturer.

Other applications include:

- Wells
- Industrial Processes
- Water Recycling and Reuse
- River and Ditch Water Intake Systems
- Food Processing Nozzle Systems
- Irrigation Water

For more information on how K-Factor filtration systems can enhance your cyclone process, provide us your requirements and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our blog. There is no obligation and we appreciate any questions or comments you care to share.
