

Degreasing

Many of today's industrial cleaners and degreasers are designed to remove tough dirt and oils; K-Factor Filters provide the ability to recycle and re-use fluids used in industrial degreasing applications with efficiency, safety, and consistent quality.

The K Factor Filter can be used in degreasing operations for the cleaning of tanks, sumps and catch drains as shown in this tank cleaning installation. The return on investment in this application was based strictly on water savings.

For more information on how K-Factor filtration systems can enhance your degreasing operations, provide us your requirements and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our blog. There is no obligation and we appreciate any questions or comments you care to share.
