

Laundry Wash Systems

Hygiene warranted and discharge compliant

Commercial-scale fabric washing takes place in many hotels and hospitals for their own staff's needs, or in businesses that cater to restaurants and other enterprises with lesser uniformed staff. Laundry wastewater recycling can make a huge difference in the long-term sustainability.

K-Factor Filters are engineered to treat wastewater with varying degrees of lint, sand and grit, emulsified oils and greases, and most other unwanted waste found in industrial laundries. After treatment, the treated effluent may be reused or released to a sanitary sewer or to a surface water in the environment. Our clients see significant reduction in water and sewage costs.

Our experienced service engineers are available to visit your facility to troubleshoot water and wastewater treatment equipment.

For more information on how K-Factor filtration systems can promote environmental protection in your industry, provide us [your requirements](#) and we will respond within two business days.
