

# Machine Coolant Filtration

K-factor Filter can improve your industrial filtration and separation processes while reducing your manufacturing costs and problems. K-Factor has installed an assortment of systems throughout the metalworking and machining industries. Our high-quality industrial grade filters prevent metal chips, fines and other debris from contaminating cutting oils and coolants.

If your process involves turning, milling, or drilling trust K-Factor to determine how best to remove unwanted solids from your cutting fluids. Multiple machining centres can be serviced by a single K-Factor Filter and platform and installation drawings are all part of our service.

For more information on how K-Factor filtration systems can improve your machining processes, provide us your requirements and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our blog. There is no obligation and we appreciate any questions or comments you care to share.
