

Nozzle Protection

K-Factor Filters can be used to filter liquids ahead of nozzle injection. Once installed, damaging material ahead of the spraying operations are removed and nozzles are protected from wear. K-Factor filters are capable of handling various types of materials in a single filtration element as shown in this stack cleaning application.

For more information on how K-Factor filtration systems can improve your process, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
