

# ONSITE TESTING AND DEMONSTRATION UNITS

K Factor filter demonstration units are used to conduct on-site verification. Preliminary testing of the K-Factor filter's suitability, reliability and feasibility is a key element of the purchasing process and confirms that the anticipated benefits of the installation will be realized.

This K-150 (150 gpm) demonstrated the effectiveness of removing zebra mussels from intake water. The demonstration revealed its capability of removing mussel larvae down to 20 microns.

This demo unit was tested on a bio-mass degasification application in an electrical grid supply system. It was subsequently adopted and installed to support the operation.

At K-Factor, we believe that on-site proof of concept and real time operational efficiency are the best ways to safeguard a risk-free experience.

This unit is used to demonstrate solids removal; rated at 70-100 gpm @ 25 microns for industrial water applications it provides both visual and operational results. In this instance, a collection tank and submersible pump were included in order to draw test samples for evaluation.

For more information on how an on-site demonstration of K-Factor filtration technologies can assist your process, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
