

Snow and Ice Melting

K-Factor Filters have been successfully employed in mobile and stationary snow melting applications.

The filter removes:

- All debris, waste, and garbage
- Dirt, sand, particulate
- Oils, sludge, and other liquids

The K-Factor Filter helps you conform to environmental impact legislation and reduces the impact on local water and waste distribution systems.

Reclaimed water can often be recirculated (such as in arena operations.)

For more information on how K-Factor filtration systems can assist you with your snow and ice melting processes, provide us your requirements and we will respond within two business days.
