

Turbine Parts

Keeping turbines clean and free of debris makes sure that everything runs at peak efficiency because individual components can perform at their best. Gearboxes, parts and hydraulic oil must contend with dust, sand, grit, insects, oil contamination.

K-Factor filter systems offer the best method for capturing and retaining fine particles as it operates continuously, circulating the oil volume in the system many times per day. With a low pressure and low flow rates, a dense filter media with exceptionally fine filtration capability can be selected.

For more information on how K-Factor filtration systems can improve efficiency and protect your turbine parts, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share.
