

Wastewater Treatment

Every municipal district operates treatment plants to ensure proper handling of wastewater. Removing contaminants from wastewater is often referred to as sewage or wastewater treatment. Treatment plants operate in challenging environments under significant regulatory scrutiny. As quality standards for discharge and reuse applications increase, many wastewater facilities integrate K-Factor filters to provide efficient water filtration technologies.

This unit is being installed in waste treatment facilities to augment discharge cleanliness and operates at 600 gpm at 23 microns.

For more information on how K-Factor filtration systems can improve your wastewater treatment facilities, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share
