

Zebra Mussel Filtration

In recent years, the Zebra Mussel has invaded our waters causing issues for industrial plants that use the lake water for production process applications. The K-Factor Filter is well suited to remove these Zebra mussels that multiply and grow rapidly.

The K-Factor Filter is a fully automatic industrial liquid filtration system that can be retrofitted into existing water intake lines to remove veligers [larvae] that are typically 40 microns or less.

Operating continuously at a low cost, K-Factor self-cleaning filters can remove solids down to 5 microns with no backwashing required.

- Available in carbon steel, stainless steel or plastic.
- Flow rates from 5 gpm to 2000 gpm
- Removes zebra mussels, sand, grit, algae and all other unwanted solids.

For more information on how K-Factor filtration systems can improve your intake flow, provide us [your requirements](#) and we will respond within two business days.

If you have any questions or would like to access current information about K-Factor Filter installations kindly review our [blog](#). There is no obligation and we appreciate any questions or comments you care to share
